Approximately 87% of barley production is within an area experiencing drought.
Percent of Barley Located in Drought
September 14, 2021

Drought percentages are approximated using the U.S. Drought Monitor product. State contributions to national production (percentages in parentheses) are derived from NASS 2017 Census of Agriculture data.
The graph shows the percent of United States Barley located in drought from September 15, 2020, to September 14, 2021. The data is approximated using the U.S. Drought Monitor product. The drought categories include Moderate or more intense drought (D1+), Severe or more intense drought (D2+), Extreme or more intense drought (D3+), and Exceptional drought (D4).

Key milestones include:
- September 15, 2020: 2.5% in D1+, 0.3% in D2+, 0.1% in D3+, and 0.0% in D4
- September 14, 2021: 93.3% in D1+, 5.3% in D2+, 4.6% in D3+, and 4.1% in D4

The graph illustrates a significant increase in drought severity over the year, with the most significant spikes occurring after April 17, 2021.
Corn Areas in Drought

Reflects September 14, 2021
U.S. Drought Monitor data

Approximately 30% of corn production is within an area experiencing drought.

Major and minor agricultural areas are delineated using NASS 2017 Census of Agriculture data. Drought areas are identified using the U.S. Drought Monitor product.
