Action will have to be taken during and after drought, no matter how well one has designed their operation for drought resilience.

Your list of reasonable options for this year may look completely different from your list of reasonable options for next year. The length of the drought, the severity of the drought, market conditions, and other factors, have a great impact on what you can do during drought. You will likely want to re-evaluate your “in-drought” options on an annual basis, at minimum.
